-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

This application has been withdrawn from issue in view of the discovery of new prior art. Prosecution on the merits is reopened.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shibata et al '287 in view of Voss et al '527.

Shibata et al disclose an adhesive composition which comprises a precondensate of resorcinol and formaldehyde and an aqueous emulsion of a copolymer of ethylene vinyl acetate (EVA). See the abstract. This reference further teaches that the ethylene to vinyl ratio of the copolymer can range from 3/97 to 40/60. This reference lacks a polychloroprene latex component.

Voss et al disclose an adhesive composition which comprises polychloroprene latex and a prepolymer of resorcinol and formaldehyde (abstract). Voss teaches that the polychloroprene latex can contain an alkali salt of a resin acid (col. 3, lines 45-65) and that the adhesive composition can be used to bond more than one class of rubber to textiles thus solving a problem in the art (abstract and col. 1, lines 43-53)

Given the disclosed versatility of the adhesive composition of Voss et al, it would have been obvious to modify the adhesive composition of Shibata et al with the

polychloroprene latex components of Voss et al with the expectation of producing an adhesive latex with greater versatility.

Claims 21 and 22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 1-3, 5-12 and 14-20 are allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Edward J. Cain whose telephone number is (571) 272-1118. The examiner can normally be reached on M-F, 10:00-6:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Wu can be reached on (571) 272-1114. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
